

$$RF = [00(0+1)^* + 11(0+1)^* + (0+1)^*00 + (0+1)^*11]$$

b)

$$[(1+0+1)^*]$$

Q4) what are similarities and differences between Moore machines and Mealy machines?

→

Moore machine

Mealy machine

output depends only upon the present state

output depends on the present state as well as present input.

Moore machine also places its output in the state.

Mealy machine places output on the transition.

more states are required

less number of states

Moore machines requires more hardware requirement for circuit implementation.

Mealy machines require less hardware requirement for circuit implementation.

They react slower to inputs

They react faster to inputs.

synchronous output and state generation.

Asynchronous output generation

Output is placed on states

output is placed on transitions
