

each of the following, describe the language generated by given CFG:

i) $S \rightarrow S a S \mid b$

String with odd number of b's

ii) $S \rightarrow a T \mid b T \mid \epsilon$
 $T \rightarrow a S \mid b S$

a a b a

Strings with even length

Apply the rules and show step by step conversion of the following grammar to CNF.

$$S \rightarrow A B C B C D A$$

$$A \rightarrow C D$$

$$B \rightarrow C b$$

$$C \rightarrow a \mid \lambda$$

$$D \rightarrow b D \mid \lambda$$
