SUMMARY

Software Engineer with 3+ years of experience designing and building scalable full-stack and distributed systems across financial services and enterprise platforms. Proficient in Java, Spring Boot, React, Angular, Kafka, Kubernetes, and AWS, with expertise in microservices, API development, event-driven architectures, and cloud-native applications. Experienced in developing Generative AI solutions using OpenAI APIs, LangChain, LangGraph, and Retrieval-Augmented Generation (RAG), with hands-on exposure to vector databases and AI-powered workflow automation. Strong foundation in system design, data structures and algorithms, observability, and building resilient high-volume applications.

SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL

Backend Technologies: Java 11/17, Spring Boot, Spring Cloud, Spring Security, Hibernate, JPA, REST APIs, gRPC, OpenFeign, GraphQL, FastAPI

Frontend Technologies: React.js, Angular, Next.js, Tailwind CSS, Responsive UI, Component-Based Design

Cloud & DevOps: AWS (EC2, S3, RDS, Lambda, DynamoDB, CloudWatch), Azure, Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, Linux

Databases & Storage: PostgreSQL, MySQL, Oracle, MongoDB, DynamoDB, Redis, Elasticsearch

Messaging & Distributed Systems: Apache Kafka, RabbitMQ, Event-Driven Architecture, Consumer Groups, Dead-Letter Queues, CQRS, Saga Patterns

Observability & Monitoring: Prometheus, Grafana, ELK Stack, OpenTelemetry, Distributed Tracing, Metrics Dashboards, Log Analysis

Testing & Quality: JUnit 5, Mockito, Integration Testing, Testcontainers, Selenium, Cypress, Postman, SonarQube

Security & API Management: OAuth2, JWT, RBAC, Spring Security, API Gateway, Encryption, Secure Coding Practices

LLM Technologies: OpenAI API, LangChain, LangGraph, Hugging Face Transformers, Retrieval-Augmented Generation, Vector DB, FAISS, Pinecone

PROFESSIONAL EXPERIENCE

KPMG Jan 2026– Present | United States

Software Engineer

- Architected and implemented distributed services for audit and advisory platforms using Java 17, Spring Boot, gRPC, PostgreSQL, and DynamoDB, supporting more than 95,000 daily requests across compliance, regulatory reporting, and financial data processing workflows.
- Designed event-driven microservices with Kafka, Redis, MongoDB, Spring Cloud, OpenFeign, and Resilience4j, enabling asynchronous processing for 12 million records across document intelligence and enterprise workflow applications.
- Modernized cloud infrastructure on AWS and Azure using Terraform, Docker, Kubernetes, GitHub Actions, and Jenkins, automating deployments across 160 cloud resources supporting multiple client-facing applications.
- Developed document intelligence capabilities using Python, OpenAI APIs, LangChain, and Retrieval-Augmented Generation techniques to streamline knowledge retrieval and accelerate research workflows for tax and advisory teams.
- Strengthened platform security through OAuth2, JWT authentication, RBAC, encryption, and API gateway policies, and implemented observability using Prometheus, Grafana, OpenTelemetry, and CloudWatch, contributing to a 31% reduction in production incidents.
- Optimized service interactions and backend performance using caching strategies, load balancing, concurrent processing, and fault-tolerant patterns to support scalable system designs for high-volume enterprise applications.

IBM Jan 2022 – Jul 2024 | India

Software Engineer

- Developed digital banking and customer self-service capabilities using Java 11, Spring Boot, Angular, and TypeScript, supporting applications used by more than 2.3 million retail customers across online banking platforms.
- Re-architected legacy monolithic applications into Spring Boot microservices deployed on Kubernetes, migrating 45 business services supporting payments, lending, and customer onboarding systems in regulated banking environments.
- Built REST APIs and event-driven workflows with Kafka and RabbitMQ for payment processing and reconciliation platforms, handling approximately 21 million transactions per month across distributed banking systems.
- Designed Angular dashboards and reusable UI components for treasury and risk management applications, improving operational visibility and reducing response times for internal business users and analysts.
- Automated developer workflows and test generation activities using Generative AI tools and prompt engineering techniques, reducing manual effort and improving productivity for development and support teams.
- Supported cloud migration initiatives involving AWS, Docker, Jenkins, and Linux environments, helping transition 140 application workloads from on-premises infrastructure with minimal operational disruptions.
- Integrated Oracle, PostgreSQL, MongoDB, and Redis caching layers into high-volume financial applications supporting 1.8 million customer accounts and transaction servicing workflows.
- Collaborated with architects, QA teams, and DevOps engineers throughout Agile delivery cycles, contributing to code reviews, integration testing, UAT activities, and production release planning processes.

SELECTED PROJECTS

Multi-Agent Financial Research Assistant (RAG + Agentic AI)

- Developed a multi-agent financial research platform using Python, FastAPI, LangChain, LangGraph, OpenAI APIs, and Pinecone, enabling semantic retrieval across more than 500,000 financial documents.
- Implemented Retrieval-Augmented Generation pipelines with vector embeddings, Redis caching, and PostgreSQL metadata storage, reducing query latency to under two seconds for complex financial queries.

AI-Powered Document Intelligence Platform

- Built a document intelligence system using Java 17, Spring Boot, Kafka, OpenAI APIs, and Hugging Face Transformers to automate classification, summarization, and semantic search across 2 million records.
- Designed event-driven microservices with gRPC communication, Elasticsearch indexing, and AWS storage pipelines to support scalable processing of enterprise documents.

Distributed E-Commerce Platform

- Architected an event-driven e-commerce platform comprising seven Spring Boot microservices integrated through Kafka, Redis, PostgreSQL, and Kubernetes, supporting 30,000 concurrent users.
- Implemented secure APIs, observability mechanisms, and distributed caching using JWT, Prometheus, Grafana, and Docker to improve resiliency and enable real-time monitoring.

EDUCATION

Master of Science in Computer Science

University of Illinois Chicago, Chicago, IL

GPA: 3.7/4.0
