SUMMARY

Senior Cloud Platform Engineer with 4.5+ years of experience designing and operating large-scale AWS and Kubernetes platforms for enterprise cloud-native systems. Specialized in building GitOps-driven infrastructure, service mesh architectures, and DevSecOps automation using Amazon EKS, Terraform, ArgoCD, and CI/CD pipelines. Experienced in implementing observability, SRE practices, and platform engineering capabilities including self-service infrastructure, distributed tracing, and multi-cluster Kubernetes management.

SKILLS

Cloud Platforms: AWS (EC2, S3, RDS, EKS, ECS, Lambda, VPC, IAM, KMS, ALB, Route53, Auto Scaling, CloudWatch, CloudTrail, ECR, EventBridge, Organizations, WAF), Azure (VMs, VNet, NSG, Azure Monitor, Azure AD, Key Vault)

Infrastructure as Code: Terraform, Terraform Modules, Remote State, Workspaces, CloudFormation, Ansible

Containers & Orchestration: Docker, Kubernetes, Amazon EKS, Helm, ArgoCD, HPA, Cluster Autoscaler, Karpenter, Istio, Cilium, Velero

CI/CD & GitOps: Jenkins, GitHub Actions, GitLab CI, Maven, Nexus, ArgoCD, Blue-Green Deployments, Canary Deployments

Monitoring & Observability: Prometheus, Grafana, OpenTelemetry, CloudWatch, ELK Stack, Splunk, Loki, Datadog, Jaeger, Tempo

Security & DevSecOps: IAM, RBAC, AWS KMS, Secrets Manager, HashiCorp Vault, SonarQube, Trivy, Checkov, OPA, Snyc

Programming & Automation: Python, Boto3, Bash, Shell Scripting, REST APIs

Databases & Messaging: PostgreSQL, MySQL, Amazon RDS, DynamoDB, Redis, Apache Kafka

Networking & Architecture: VPC, VNet, Subnetting, Route53, DNS, Load Balancers, High Availability, Disaster Recovery

Site Reliability Engineering: SLIs, SLOs, Error Budgets, Incident Response, Root Cause Analysis (RCA), Capacity Planning

Tools & Collaboration: Git, Linux, Jira, Confluence

WORK EXPERIENCE

Epic, Cincinnati, OH

Aug 2024 – present

Cloud Engineer

- Architected AWS-based healthcare analytics platform using Amazon EKS, Terraform, PostgreSQL, and microservices architecture, supporting 3+ Kubernetes clusters and improving scalability and deployment consistency across environments.
- Built event-driven data pipelines using Apache Kafka, Spark, and AWS services, enabling high-throughput healthcare data ingestion and reducing processing latency by 45% across analytics workloads.
- Developed reusable Terraform modules with remote state and policy-driven governance, reducing infrastructure provisioning time by 40% and standardizing multi-environment deployments.
- Optimized Kubernetes workloads using HPA, Cluster Autoscaler, and Karpenter along with service mesh patterns (Istio), improving autoscaling efficiency and maintaining 99.9% platform availability.
- Implemented centralized observability using Prometheus, Grafana, OpenTelemetry, Datadog, CloudWatch, and Loki, enabling distributed tracing and reducing MTTR by 40%.
- Strengthened cloud security using IAM, KMS, Secrets Manager, and OPA-based policies, enforcing least-privilege access and improving compliance for regulated workloads.
- Implemented cost optimization and capacity planning strategies including rightsizing, autoscaling improvements, and storage lifecycle policies, reducing cloud infrastructure spend by 25% while maintaining performance.

Wells Fargo, St Louis, MO

Sep 2023 – Jul 2024

Cloud Engineer

- Led migration of enterprise applications to AWS using EC2, S3, RDS, IAM, and VPC services while implementing Terraform-based Infrastructure as Code, reducing infrastructure provisioning time by 40% and improving deployment consistency across environments.
- Developed CI/CD pipelines using Jenkins, Git, Maven, Nexus, and SonarQube to automate build, testing, and release processes, reducing release cycle times by 55% and improving deployment reliability across Dev, QA, and Production environments.
- Containerized applications using Docker and deployed microservices on Amazon EKS with Helm charts and Kubernetes orchestration, enabling highly available, zero-downtime deployments for high-traffic enterprise applications.
- Strengthened AWS security using IAM, VPC, Security Groups, NACLs, and Secrets Manager while enforcing least-privilege access models, reducing production configuration issues by 35% and improving governance.
- Built observability platforms using Prometheus, Grafana, ELK Stack, and CloudWatch, enabling proactive monitoring and improving incident detection speed by 60%.
- Automated infrastructure provisioning and configuration management using Terraform and Ansible, standardizing Dev, UAT, and Production environments and reducing manual operational effort by 50%.
- Integrated DevSecOps controls using AWS KMS, Vault, Trivy, SonarQube, Checkov, and vulnerability scanning frameworks, enabling secure software delivery and maintaining zero critical security incidents in production.

Hexaware Technologies, India

Jan 2021– Dec 2022

DevOps Engineer

- Engineered end-to-end AWS migration of enterprise applications using EC2, S3, RDS, IAM, and VPC, designing secure multi-tier architecture with public/private subnets and reducing provisioning time by 40% using Terraform (IaC).
- Built and optimized CI/CD pipelines with Jenkins, Git, Maven, and Nexus, enabling automated build-test-deploy across Dev/QA/Prod environments, reducing release cycle time by 55% and failures by 30%.
- Containerized applications using Docker and deployed microservices on Amazon EKS (Kubernetes) using Helm charts, enabling

scalable, zero-downtime deployments for high-traffic enterprise workloads.

- Strengthened AWS security using VPC, IAM, Security Groups, and NACLs, enforcing least-privilege access control and reducing misconfigurations in production by 35%.
- Implemented observability using Prometheus, Grafana, CloudWatch, and ELK stack, enabling real-time monitoring, centralized logging, and improving incident detection speed by 60%.
- Automated infrastructure provisioning using Terraform and Ansible, standardizing Dev/UAT/Prod environments and reducing manual operations by 50% across AWS accounts.
- Integrated DevSecOps controls using AWS KMS, Secrets Manager, and Vault, ensuring encrypted secrets management, secure microservices communication, and zero critical security incidents in production.

SELECTED PROJECTS

Enterprise Kubernetes Platform with GitOps and DevSecOps

- Designed and implemented Kubernetes platform on AWS using Amazon EKS, Terraform, Docker, Helm, ArgoCD, and GitHub Actions, enabling GitOps-based application delivery and standardized infrastructure provisioning across multiple environments.
- Integrated DevSecOps and observability capabilities using SonarQube, Trivy, Checkov, AWS KMS, Secrets Manager, Prometheus, Grafana, and OpenTelemetry to improve deployment security, monitoring, and platform reliability.

Cloud Infrastructure Automation and Disaster Recovery Framework

- Developed an Infrastructure as Code framework using Terraform, Ansible, and AWS services including EC2, RDS, VPC, Route53, S3, and Auto Scaling to automate environment provisioning and support highly available cloud architectures.
- Implemented backup, disaster recovery, and monitoring strategies using CloudWatch, Lambda, SNS, and AWS snapshots, improving operational resilience and reducing recovery time for critical workloads

Cloud-Native Observability and Site Reliability Engineering Platform

- Built a centralized observability platform using Prometheus, Grafana, ELK Stack, Loki, OpenTelemetry, and CloudWatch to provide metrics collection, distributed logging, dashboarding, and proactive alerting for microservices environments.
- Implemented SRE practices including SLIs, SLOs, incident response workflows, capacity planning, autoscaling, and root cause analysis to improve service reliability and support highly available cloud-native applications.

EDUCATION

Master's in Information Systems and Business Analytics

Park University, Kansas City, MO

Bachelor of Technology in Computer Science Engineering

KL University, Hyderabad, Telangana, India
