SUMMARY

Senior Software Engineer with 4.5+ years of experience building scalable distributed systems, full-stack applications, and AI-powered solutions across finance and healthcare. Expertise in Java, Spring Boot, React, Angular, Kafka, Kubernetes, and AWS, with experience in LLMs, RAG pipelines, and vector search. Delivered high-performance, production-grade systems at scale.

SKILLS

Languages: TypeScript, JavaScript, Java, Python, SQL
Frontend & Web Technologies: Angular (10+), React.js, Next.js, Redux, HTML5, CSS3, Tailwind CSS, Bootstrap 5, AJAX, JSON, XML, jQuery
Backend: Node.js, Django, J2EE, Spring Boot
Cloud & Platforms: AWS (CloudFront, S3, Lambda, API Gateway, Amplify), GCP (Firebase, Cloud Functions, Storage)
Databases: MongoDB, PostgreSQL, Firebase Realtime DB, DynamoDB, MySQL
Streaming & Messaging: Apache Kafka, RabbitMQ
DevOps & Tools: Docker, Kubernetes, Jenkins, GitHub Actions, Git, Postman, JIRA, Figma
Testing: Jest, Cypress, Enzyme, Lighthouse, JUnit, Mockito
AI & Generative AI: OpenAI APIs, GPT models, RAG pipelines, prompt engineering, Claude API, Claude Code, Anthropic SDK, FAISS, Pinecone

PROFESSIONAL EXPERIENCE

- Capgemini Technology Services India Ltd. | Senior Software Engineer

Jun 2023 – Jun 2024

 - Built a high-throughput distributed platform using Spring Boot, Node.js, and React.js to aggregate real-time financial data from multiple sources, enabling low-latency dashboards used by 1,000+ global analysts.
 - Developed an event-driven microservices architecture using Docker, Kubernetes, Apache Kafka, and RabbitMQ with fault-tolerant workflows that reduced settlement reconciliation time to under 40 minutes per batch.
 - Scaled and maintained 100+ RESTful and GraphQL APIs secured with OAuth2, supporting integrations across banking systems and processing 300,000+ requests daily with high availability.
 - Improved observability by centralizing metrics through CloudWatch and integrating Prometheus and Grafana dashboards, reducing incident resolution time to under 15 minutes and enhancing reliability.
 - Streamlined CI/CD pipelines using Git, Docker, Kubernetes, automated testing, and code review practices, enabling zero-downtime deployments and resilient release cycles.
 - Integrated retrieval-based AI capabilities using OpenAI APIs and RAG pipelines for intelligent reporting and trade summarization, reducing manual effort by 40%.
- Capgemini Technology Services India Ltd. | Software Engineer

Mar 2022 – Jun 2023

 - Designed and delivered scalable frontend architecture using Angular (10+) and TypeScript for healthcare workflows, improving usability, accessibility, and reliability of clinician-facing applications handling critical data.
 - Built and owned secure backend services and APIs using Node.js and Express, enabling concurrent access to healthcare data systems and external integrations, handling 10,000+ requests with high availability and stability.
 - Implemented automated data workflows and AI-driven summarization systems using cron jobs and OpenAI APIs, enabling efficient processing of large-scale datasets and improving reporting accuracy across operational systems.
 - Developed high-performance UI components using React.js and Redux, applying lazy loading, memoization, and performance optimization techniques to significantly improve page load times and user interaction.
 - Led frontend modernization and design standardization initiative by migrating legacy CSS systems to Tailwind CSS, improving scalability, consistency, and maintainability across 5+ applications.
 - Established cloud-native deployment pipelines using Docker and Terraform, enabling automated infrastructure provisioning, reliable deployments, improved system uptime, and compliance with enterprise standards.
- Zensar Technologies | Software Engineer Intern

Aug 2020 – Mar 2022

 - Refactored and optimized backend services and data models using Node.js and MongoDB for financial transaction systems, improving data consistency, throughput, and synchronization across distributed systems.
 - Enhanced system scalability and performance for a financial reporting platform handling 200,000+ daily transactions, implementing caching strategies, optimized queries, and robust error handling.
 - Migrated legacy frontend systems from AngularJS to Angular (6+), improving responsiveness, maintainability, and usability for 5,000+ users across reporting and portfolio applications.
 - Automated workflows using Python and Bash scripts for monitoring and audit reporting, reducing manual effort by 60+ hours per month.
 - Designed scalable data pipelines using Apache Kafka for real-time batch processing, improving data availability and analytics performance.
 - Contributed to Agile development processes, including sprint planning, backlog refinement, and retrospectives, improving delivery efficiency and team collaboration.

EDUCATION

Master of Science in Software Engineering | Arizona State University, USA

May 2026

Bachelor of Engineering in Information Technology | Pune University, INDIA

May 2022

SELECTED PROJECTS

- AI Infrastructure Research Dashboard | [GitHub](#) | [View Live](#) | [Demo View](#)
- Developed an AI infrastructure analytics platform using Python, FastAPI, React, and Streamlit with LLM-powered insights, secure JWT authentication, and cloud-ready architecture for monitoring distributed AI systems.
- Receipt Genie (AI Receipt Intelligence System) | [GitHub](#) | [View Live](#) | [Demo View](#)
- Built an AI-driven receipt processing application using Python, OCR, Streamlit, and LLM-based extraction to transform unstructured receipts into structured financial data through a scalable backend pipeline.
- LegalEase – AI Contract Analyzer | [GitHub](#) | [Demo View](#)
- Created an LLM-powered contract analysis system with semantic search and embedding-based document processing using Python and NLP frameworks, enabling automated legal document interpretation and scalable API integration.
