SUMMARY

Senior Software Engineer with 4.5+ years of experience building scalable distributed systems, full-stack applications, and AI-powered solutions across finance and healthcare. Expertise in Java, Spring Boot, React, Angular, Kafka, Kubernetes, and AWS, with experience in LLMs, RAG pipelines, and vector search. Delivered high-performance, production-grade systems at scale.

SKILLS

Languages: TypeScript, JavaScript, Java, Python, SQL
Frontend & Web Technologies: Angular (10+), React.js, Next.js, Redux, HTML5, CSS3, Tailwind CSS, Bootstrap 5, AJAX, JSON, XML, jQuery
Backend: Node.js, Django, J2EE, Spring Boot
Cloud & Platforms: AWS (CloudFront, S3, Lambda, API Gateway, Amplify), GCP (Firebase, Cloud Functions, Storage)
Databases: MongoDB, PostgreSQL, Firebase Realtime DB, DynamoDB, MySQL
Streaming & Messaging: Apache Kafka, RabbitMQ
DevOps & Tools: Docker, Kubernetes, Jenkins, GitHub Actions, Git, Postman, JIRA, Figma
Testing: Jest, Cypress, Enzyme, Lighthouse, JUnit, Mockito
AI & Generative AI: OpenAI APIs, GPT models, RAG pipelines, prompt engineering, Claude API, Claude Code, Anthropic SDK, FAISS, Pinecone

PROFESSIONAL EXPERIENCE

Capgemini | Senior Software Engineer Jun 2023 – Jun 2024

- Built a high-throughput distributed platform using Spring Boot, Node.js, and React.js to aggregate real-time financial data from multiple sources, enabling low-latency dashboards used by 1,000+ global analysts.
- Architected an event-driven microservices platform using Docker, Kubernetes, Apache Kafka, and RabbitMQ, implementing parallel processing and fault-tolerant workflows to automate settlement reconciliation and reduce processing time to under 40 minutes per batch.
- Scaled and maintained 100+ RESTful and GraphQL APIs secured with OAuth2, supporting integrations across banking systems and processing 300,000+ API calls daily with high availability and resilience.
- Consolidated application and infrastructure metrics through CloudWatch and integrated Prometheus and Grafana dashboards, reducing incident resolution time to under 15 minutes and improving overall system reliability.
- Streamlined CI/CD and release engineering processes using Git, Docker, Kubernetes, automated testing frameworks, and code review practices, enabling zero-downtime deployments and resilient release cycles.
- Integrated retrieval-based AI capabilities using OpenAI APIs and RAG pipelines to build intelligent reporting and trade summarization systems, reducing manual effort by 40% and accelerating decision-making workflows.

Capgemini | Software Engineer Mar 2022 – Jun 2023

- Delivered scalable frontend architecture using Angular (10+) and TypeScript for healthcare workflows, improving usability, accessibility, and reliability of clinician-facing applications handling critical data.
- Engineered secure backend services and REST APIs using Node.js and Express, enabling concurrent access to healthcare systems and external integrations and handling 10,000+ requests with high availability and operational stability.
- Automated large-scale data workflows and AI-assisted summarization systems using cron jobs and OpenAI APIs, enabling efficient processing of datasets and improving reporting accuracy across operational systems.
- Optimized React.js and Redux components through lazy loading, memoization, and performance tuning techniques, significantly improving page load times and user interaction.
- Modernized frontend styling frameworks by migrating legacy CSS systems to Tailwind CSS, improving scalability, consistency, and maintainability across more than five applications.
- Established cloud-native deployment pipelines using Docker and Terraform, enabling automated infrastructure provisioning, reliable releases, improved system uptime, and compliance with enterprise standards.

Zensar Technologies | Software Engineer Intern Aug 2020 – Mar 2022

- Refactored backend services and data models using Node.js and MongoDB for financial transaction systems, improving data consistency, throughput, and synchronization across distributed environments.
- Enhanced system scalability and performance for a financial reporting platform handling 200,000+ daily transactions through caching strategies, query optimization, and robust error-handling mechanisms.
- Migrated legacy frontend applications from AngularJS to Angular (6+), improving responsiveness, maintainability, and usability for more than 5,000 users across reporting platforms.
- Orchestrated monitoring and audit reporting workflows using Python and Bash scripts, reducing manual effort by more than 60 hours per month and improving operational efficiency.
- Implemented Apache Kafka-based data pipelines for real-time batch processing workloads, improving data availability, analytics performance, and processing efficiency.
- Contributed to Agile development activities including sprint planning, backlog refinement, retrospectives, and collaborative development practices to improve delivery efficiency and team coordination.

EDUCATION

Master of Science in Software Engineering | Arizona State University, USA May 2026
Bachelor of Engineering in Information Technology | Pune University, INDIA May 2022

SELECTED PROJECTS

AI Infrastructure Research Dashboard | [GitHub](#) | [View Live](#) | [Demo View](#)

- Developed an AI infrastructure analytics platform using Python, FastAPI, React, and Streamlit with LLM-powered insights, secure JWT authentication, and cloud-ready architecture for monitoring distributed AI systems.

Receipt Genie (AI Receipt Intelligence System) | [GitHub](#) | [View Live](#) | [Demo View](#)

- Constructed an AI-driven receipt processing application using Python, OCR, Streamlit, and LLM-based extraction to transform unstructured receipts into structured financial data through a scalable backend pipeline.

LegalEase – AI Contract Analyzer | [GitHub](#) | [Demo View](#)

- Created an LLM-powered contract analysis system with semantic search and embedding-based document processing using Python and NLP frameworks, enabling automated legal document interpretation and scalable API integration.
